2015 Summer Rhizome Sales Chm.

Betty Ford

SATURDAY SEPTEMBER 5, 9-3: IRIS RHIZOME SALE at LUTHER BURBANK ART & GARDEN CENTER

TUESDAY THRU THURSDAY SEPTEMBER 8-10: SRIS BOOTH AT 5TH ANNUAL NATIONAL HEIRLOOM EXPO, GRACE PAVILION, SONOMA COUNTY FAIRGROUNDS (1350 Bennett Valley Rd., Santa Rosa)

MONDAY SEPTEMBER 14 – NO MEETING

On Saturday September 5 starting at 7:00 a.m. bring your extra iris rhizomes, labelled and trimmed, to the Center where you'll receive photo labels prepared by Joe Lawrence to stick on grocery bags where you'll put your irises for the sale. Sale open to the public 9-3. If you haven't sent Joe the list of irises you are donating, send it right away to clvineyard@aol.com. The list should consist of: name of iris, hybridizer, year of introduction, type of iris (TB, BB, SDB, etc.).

On Monday September 7 starting at 1:00 p.m. we'll set up the SRIS rhizome sale booth at the Fairgrounds for the Heirloom Expo. Persons working the booth are limited to 3 per shift: 11-3:30 and 3:30-8 p.m. If you are signed up with Betty Ford, just before your shift pick up your free entry pass at "Will Call" at the Bennet Valley Rd. entrance right behind Grace Pavilion. You'll have to pay for parking or park in the neighborhood and walk in. If you're not signed up, admission is \$15/day or \$30/all 3 days. Billed as the "World's Pure Food Fair", the Natl. Heirloom Expo features hundreds of exhibits, vendors, and speakers on topics relating to food crops, gardening, and domestic animals with focus on heritage varieties and breeds.

c. Jeanette Graham

GYPSY LORD WINS DYKES
Keith Keppel's magnificent 2006 tall bearded introduction 'Gypsy Lord' is the 2015 recipient of the highest award for irises from the US and Canada, the Dykes Medal. Standards are blue white; falls same with blue violet wash and pale blue wire rim; beards paprika.

Photo by Jeanette Graham, from the iris wiki.

The five runners-up were 'Swans in Flight' (Hollingworth, 2006, SIB), 'Absolute Treasure' (Tasco, 2006, TB), 'Montmartre' (Keppel, 2008, TB), 'Bluebeard's Ghost' (P. Black, 2006, SDB), and 'Chief John Jolly' (Parkhill, 2003, TB). The three John C. Wister Medals for Best TB chosen from TB Award of Merit winners from a specified time period are: 'Money in Your Pocket' (Black, 2007), 'Snapshot' (Tom Johnson, 2008), and 'Temporal Anomaly' (Tasco, 2007).

SRIS members also received recognition in the 2015 AIS judges voting. Anna and David Cadd's 'Saint Patrick's Gold' (2003) was 2nd runner-up for the Eric Nies Medal for spurias; their TB 'Lady in Purple' (2011) received an Honorable Mention (HM) in the TB category, and Ross BeVier's Solar Power (2012) was a runner-up for a TB HM. Well-deserved congratulations to our local hybridizers!

For photos of 2015 winners and runners-up go to: wiki.irises.org/bin/view/Main/InfoAwards2015 .

Gardening Tips for September

Anna Cadd

Tips for this month are more iris-related than usual. Longtime SRIS members know it all, but we have a lot of new members. And it is also good to refresh our memories and be ready to answer the public's questions at rhizome sales. Next month I'll have a broader focus.

1. September — and it feels like fall already. With this four-year drought, trees are very stressed, changing colors and dropping leaves early. It's hard to imagine, how hardy irises are. I have some beds that have not been weeded or watered since spring, as there is never enough time between work, caring for David and catching needed sleep. They still look good; of course not Betty Ford iris quality, but they will be okay. No matter how you much you love them, sometimes life just gives them a hard time. Irises understand and forgive....
2. This is iris planting time. Good soil preparation is the key to success. Amend your soil with good compost mixed with steer manure and add some fertilizer, but not too much. Until there are good roots, the plant can't utilize fertilizer. On the other hand, it takes about 4 to 6 weeks for fertilizers to turn from commercial form to the form readily useable by plants and in 6 weeks there are new, fresh roots already. Of course you need to water them at least twice weekly. Deep watering is better than just sprinkling the soil surface.
3. How deep should the rhizome be planted? In light-textured soils such as sand, it can be covered by as much as one inch of soil; but for average to heavier soils, the top of the rhizome is best left exposed to the healthful influences of sun and air. Remember that the rhizome is a stem, not a root, and needs to breathe!
4. Extremely important is to make the labels right away and "plant" them together with your irises. You will not remember what is planted where and the writing on the leaves will disappear faster than you think. You paid good money for your plants; but if you can't show them, vote for them, donate the increases to the Club or answer visitors to your garden when they ask the name of this beauty in front of them, there is no point of having them. The longer you belong to an iris club, the more paranoid you become about the names. So name tags and a map of the garden are musts!
5. During our iris sale and the following Heirloom sale one of the most asked questions will be - "when should I cut the leaves off my irises?" I am not sure where people got this ancient idea from and why it is so hard to persuade them not to do so. Maybe grandma cut off the leaves to make the half dead, never watered and fertilized irises look better; and the idea stuck for the next generations. Gardeners don't cut off the leaves of daylilies, roses, lantanas, etc. Iris leaves play an important part in feeding the plants, storing nutrients in the rhizomes and preparing the plants to bloom next spring. Nobody cuts off the hands of the working person! Irises are great garden perennials, intended to look good all year round with spiky, dramatic, different green leaves, making a poignant focus and background for other plants. We don't have really lush gardens anymore with this drought, but there are gardens, where water is abundant and irises are great landscape fillers. We don't cut off the leaves, until it is absolutely necessary!

6. I need to add that needlessly trimming the foliage back in the middle of the season actually breaks an iris' dormancy, kick-starting new leaf production. This can take away from root mass accumulation and even from reserves meant to support flowering the next spring. The long and short of it is to leave the leaves alone!
7. Trimming the foliage. We trim iris foliage only when we transplant the plants. There are several reasons for doing it. It is really easier to ship, transport and store irises with less leaf length and volume. When we plant them back, it is better to plant with short leaves, so there is less risk of wind, animals or humans tipping the new plants over. We also trim the roots, which sometimes can be very long, so trimming the leaves makes the plant balance. New roots can't efficiently pump water to the leaves, so a big surface area of leaves makes a big area of transpiration, the evaporation of water from leaf surfaces. This is why we trim irises during planting time.

From the President's Desk

Just when I think our Society can't get any busier, it does! Our Auction-Picnic at the C&L Vineyard in Sonoma on August 2 was a huge success, with 28 in attendance by my count. Thank you, Joe and Rudy for providing your barbecue, your beautiful property, and your warm hospitality, and to the many members who donated rhizomes and/or attended. Special thanks to Rudy for insisting for on a \$5 minimum bid for very recent varieties, to Jean Sharp for her tireless auctioneering, and to Joe Lawrence for keeping the tally and billing us. Our coffers were made healthier.

On August 15 we had a work party at the Display Garden. In scorching heat, Jeff Davis worked on the new drip system plumbing; Jim Begley installed two cubic yards of compost in the door prize bed and then rototilled it in; and Anna Marie Hermansen, Cheryl Bryan, and Alleah Haley did more spurge removal. Then on August 21 the following members planted the door prize irises and did more weeding at the Display Garden: Jim Begley, Cheryl Bryan, Rudy Ciuca, Betty Ford, Diana Ford, Marlene Freetly, Alleah Haley, Joe Lawrence, Jean Sharp, and Bill Tatham. On August 29 Jeff finished installing drip in the door prize bed. Thank you, thank you all for all your hard work.

Next up is our annual rhizome sale on September 5 at LBAGC from 9-3 and the three-day information and iris sale booth at the Heirloom Festival September 8-10. I know many of you are frantically digging, trimming, and labelling iris rhizomes to donate to these sales. I really appreciate your efforts, folks. Jeff hopes to get some help completing the drip system in the rest of the display garden during our September 5 sale. PLEASE come and share your iris fever or if you'd rather plumb, come help Jeff.

KSRO AM radio 1350 had a discussion of irises on their Saturday morning garden show on August 29. Big thank yous to Jean Sharp for letting me know it was on that morning and to Marlene Horn for calling in to tell them about the existence of the Santa Rosa Iris Society, our September rhizome sales with dates and times and to correct some of the culture information that was given. I plan to send an email to radio host Steve Garner with additional information about our society, irises, and iris culture so he can be better informed.

Alleah Haley

This Month

Saturday, September 5, 9-3 – Rhizome sale, LBAGC.

Monday, September 7, 1:00 p.m. – Set up at Heirloom Expo.

Tuesday thru Thursday, September 8-10 – 5th Annual Heirloom Expo, Sonoma Co. Fairgrounds. SRIS will have a booth.

2015 Iris Events and Important Dates

Monday, October 12 – Rudy Ciuca and Joe Lawrence, Introduction to Wine Tasting.

Friday and Saturday, October 16 & 17 – AIS Region 14 Fall Meeting & Reblooming Iris Show, Wyndham Hotel, Visalia. Guest Speaker Chuck Bunnell, hybridizer of MTB 2014 Dykes Medal winner 'Dividing Line'.

Friday, November 6 (note revised date) – Holiday Potluck/Come Dressed as an Iris Costume Party, LBAGC. Set up starts at 4 pm; we'll eat around 5:30 pm.

2015 Board Meetings - Board Members and Officers, please mark your calendars:

Monday, November 9, 6:00 PM

Monday, December 14, 6:00 PM

From the Editor – **Many thanks** for contributions to this issue: **Kay Ashbrook** of LABGC Board, **Anna Cadd, Rudy Ciuca, Jeff Davis, Betty Ford, Anna Marie Hermansen, Joe Lawrence, Keren Pratz** of McKinney, Texas, and **Phyllis Wilburn**. *Alleah*

Plant Sales

September 5 – November 1, 10-5 - Perennials Weekends, nursery open at Occidental Arts & Ecology Center, 15290 Coleman Valley Rd., Occidental. Tour Sept. 6, 1:00 p.m. For info call 874-1557 ext. 101 or go to www.oaec.org.

Saturday, October 10, 9-1 – Milo Baker Chapter, Calif. Native Plant Society, Vet's Memorial Bldg., 1351 Maple, Ave., Santa Rosa. Native shrubs, perennials, bulbs, seeds, books & posters.

Sunday, October 25, 10-2 - Windsor Garden Club, Windsor Town Green, McClellan & Market St. Succulent topped pumpkins and fall color pots.

Notice: Changes to Roster

Please welcome the following returning member back to our club:

Keeping In Touch

Member **Barb Baruth** lives part of each year in Wisconsin. On August 24 she wrote:

"Thank you for sending me [my door prize iris] 'Fred and Ginger'. I've planted "them" in my garden here right next to the deck where we sit at our table to eat in the summer. I'm looking forward to seeing them next spring.

We've had some very bad news – our older son, Alex, 31, was diagnosed with [a serious illness]. All our plans have changed and we might not be able to spend time in Santa Rosa this winter. Perhaps I'll come out for a few days in Oct. Say hi to Anna Marie and all the others at the SRIS for me.
– Barb"

This just in: the **Cadds'** vacation in Oregon was interrupted on Monday August 17 when David became ill. Anna drove him home, and he was admitted to Kaiser Santa Rosa that night. A week later Kaiser decided they could do no more for David. He is at home under hospice care with family in attendance. Please send cards to:

David and Anna Cadd

2014 Registrations and Introductions Book

Anna Cadd

The new 2014 Registrations and Introductions booklet has just arrived. In 2014 there were 973 irises registered originating in 15 countries, with 51.0% of the total originating in North America (USA - 487, Canada - 9). Isn't this extremely interesting? AIS, acting as the "umbrella" for the de facto world iris associations, is responsible for only half of introduced irises. AIS is moving global with our love of irises!

Other countries represented are: Russia (116), Ukraine (79), Australia (77), Poland (40), France (37), China (36), United Kingdom (24), Germany (22), New Zealand (20), Czech Republic (9), Slovak Republic (9), Netherlands (5), Belgium (3).

Of the 973 new registrations, 65.7% are tall bearded, 20.7% other bearded irises and 13.7% are beardless, species or species hybrids. Totals by class are as follows:

639	Tall Bearded	65.7%
109	Standard Dwarf Bearded (SDB)	11.1%
39	Species Hybrid (SPEC-X)	4.0%
39	Intermediate Bearded (IB)	4.0%
27	Louisiana (LA)	2.8%
20	Miniature Tall Bearded (MTB)	2.1%
18	Pacific Coast Native (CA)	1.8%
16	Siberian (SIB)	1.6%
15	Border Bearded (BB)	1.5%
15	Species (SPEC)	1.5%
12	Japanese (JI)	1.2%
11	Miniature Dwarf Bearded (MDB)	1.2%
7	Arilbred (AB)	0.6%
6	Spuria (SPU)	0.6%

Now you know the class to hybridize and introduce to win a Dykes Medal, a class where the competition is non-existent! Grab the tweezers!

The booklet is available for \$13 (includes shipping and handling; make check to The American Iris Society) from the AIS Storefront, John and Kay Ludi, PO Box 956, Sandy, OR 97055. Can also be charged on VISA or MasterCard – see details at the bottom of page 63 of the Spring 2015 issue of "Irises" or under AIS Storefront at www.irises.org.

Rebloom in Kansas

SRIS member **Elizabeth Cooke** now lives in Elkhart, Kansas, in the far southwest corner of the state. On August 28, 2015 she reported that she had the following irises in bloom:

- 'Sugar Blues' (Zurbrigg 1985, TB) – wisteria blue self; white beard, yellow in throat. Pod parent was 'Victoria Falls', a rebloomer.
- 'Adventurous' (Michael Sutton 2010, TB) – S. yellow, slightly veined white; F. violet blue veined light blue, ¾" ruby red band; beards yellow. Two stalks, one with 9 buds!
- 'Blue Suede Shoes' (Schreiners 1996, TB) – ruffled medium blue self; beards yellow, white at end.

To Treat or not to Treat - That is the Question

Anna Cadd

Now that we have or soon will have all the iris rhizomes our hearts desire, it is time to think – should we plant them right away, or soak them in some solution to protect our gardens against diseases or pests that could get a "free ride" on rhizomes, especially irises from other states. In our club we used to dip and soak the rhizomes in fungicides, but we stopped using them, as the time during digging is always in short supply and results were not obvious. Also the strong environmental push against using poisonous chemicals was part of the decision to stop it. Some of us soak iris rhizomes in 10% Clorox solution, to prevent diseases.

The information below is for those eager to soak their iris in bleach. It comes from last week's issue of Science magazine: "The Littlest Farmhands" by Jop de Vrieze at: <https://www.sciencemag.org/content/349/6249/680.summary>

"Scientists have recently discovered thousands of microbial species living in, on, and around plant roots that help plants survive and thrive—for instance by facilitating the uptake of nutrients and water, warding off pests and diseases, and enabling plants to cope with drought, flooding, toxins, or extreme temperatures. Scientists are trying to harness these symbionts for use in agriculture. Several microbial products are already in use on the farm, and major agrochemical companies are investing heavily in research to develop others. To what extent microbial products can eventually increase yields or reduce the use of pesticides and chemical fertilizers is still unclear, however".

A bleach soak will kill beneficial surface bacteria together with the "bad guys", which may or may not be sitting on the rhizomes. It has no effect on any disease that a plant has deep in the tissue. It may help with bacterial soft rot, but only if diseased tissue is removed first.

When the Cadds were shipping plants abroad, they needed to be inspected by the county agricultural commissioner, who was supposed to know the requirements for export to different countries. No agricultural inspection required treatment by bleach, or any other external sterilizing agent. All required cleaning and that plants be free of dirt. Some countries required a systemic treatment, some required fumigation for root nematodes, etc. External sterilization by Clorox was never required. If Clorox worked, they would have it as a standard treatment. As they don't, you can bet they have a good reason.

Improper treatment of iris rhizomes with bleach can deform growth the first year after planting. Plants will be stunted and the leaves may grow curved, sometimes with the tip touching the ground. They generally recover and grow right the second year, but they may not bloom until the third year. This is probably true if you will soak the plants in pure Clorox. From my experience 10% solution for 1/2 hour will not cause any problem the following year. I suspect plants treated with bleach will have no differences in diseases and survival than rhizomes untreated, but they may have fewer and smaller increases. What do you think?

Meetings & Membership

The Santa Rosa Iris Society meets the second Monday of each month February through October at 7:30 p.m. at the Luther Burbank Art and Garden Center, 2050 Yulupa Avenue, Santa Rosa, California. In November instead of having a regular meeting, we have our annual holiday potluck dinner and dress up as an iris name costume party, held this year on Friday November 6.

Membership dues are \$15.00 per year. Send payment to: Santa Rosa Iris Society c/o Betty Ford, 1383 E. Napa St., Sonoma, CA 95476. Membership offers regular meetings, iris door prizes, special programs, use of our library, a monthly newsletter, annual iris show and rhizome sale, and fellowship with other iris lovers. For more information call Anna Cadd 433-8633, Anna Marie Hermansen, Betty Ford, or Juanita Breckwoldt.

October Newsletter Deadline – September 20th
